

Carver Engineering and Science is a selective-admissions, college-preparatory public school serving 900 students in grades 7-12. Our academically talented student body comes from a diverse, mostly underrepresented, population living in all areas of the city. 100% of our students are accepted to college every year with *67% of our students aiming to be the first in their family to graduate from college*. Our students choose from a range of options from community college to our nation's most prestigious schools. Our alumni post-secondary graduation rate exceeds the national average and changes the life trajectory for our students.

Carver Commons

To continue to propel our college success environment, we are redesigning our existing library from an outdated, underutilized space void of a librarian to a **vibrant learning commons**.

This space will offer our students:

- Center for inquiry-based learning
- Hub for scholarly research
- Full service Writing Center
- Collaborative work spaces
- Individual study areas
- Symposium area for larger presentations

The Carver Commons will support our mission of creating a *transformative educational experience* for our students through introducing them to a collegiate setting with embedded supports.

Please join us in making this space a reality for our students. Visit hse.philasd.org/CarverCommons.
